

Summary Election Program Perspectief Horst aan de Maas 2022

Perspectief translates to 'perspective' in English

Here you will find an overview of what Perspectief stands for. In six core values, we explain how we see the future. In the complete program, we propose how to achieve it.

A clear perspective

All our core values are interconnected. We work on solutions based on connection. When we think about the climate, for example, we also need to look at the future of our youth. When we focus on economic development, we must also pay attention to social coexistence. When we are involved with nature and farming, we must also pay attention to transparent governance.

An honest perspective

1. A space and a future for our youth

Perspectief stands for a good future for the children and grandchildren of Horst aan de Maas. We pay attention to the (mental) health of young people, but also to a healthy and affordable environment. We encourage sports, culture, art and socializing. Youth facilities receive extra support.

We pay attention to education and information: we have to learn how to live together. We also learn from young people: we actively listen to young people and let them make decisions about their own future. We create a space and a future for our youth with our youth.

In the program, you will find proposals for '*A future for our youth*', '*Youth facilities*' and '*Care and education*'.

2. Social coexistence

Perspectief stands for care and equal opportunities for everyone. People in need are central. Nobody is a number, so we provide custom care. We pay attention to caregivers and the lonely. We strive for a socially and physically accessible community. Everyone should be able to participate.

Different identities must feel at home in Horst aan de Maas. Art and culture play a big role in this. We live together in a warm community, respecting our differences. We fight growing social and economic inequality. There will be clear rules for the employment and housing of (labour) migrants. The quality of life for all residents is central.

In the program, you will find proposals for '*Care*', '*Living together*' and '*(Labour) migrants and newcomers*'.

3. Nature & Farming

Perspectief stands for a healthy and green living environment for everyone, with respect for our agricultural history. Nature provides us with food and a pleasant living environment. We should treat this with sustainable care. We are a voice for people, animals, plants and soil. We provide nature-inclusive and land-based agriculture. We pay attention to the capacity of the region and the impact on the scenery.

Many farmers and entrepreneurs are already working on the transition to environmentally friendly and natural business. Good and transparent cooperation between the municipality and the farmers ensures a sustainable and profitable sector. We invest heavily in knowledge. We actively listen to farmers who have good ideas for this transition. We are rural pioneers.

In the program, you will find proposals for '*Agriculture*' and '*Nature, environment and scenery*'.

4. Climate

Perspectief stands for a sustainable world that we can proudly pass on to the next generation. We aim for a CO2 neutral municipality by 2050 and will seize all helpful possibilities to reach this goal earlier. We save energy and reduce emissions. We build with sustainable materials and support alternative forms of building and living.

It is important that everyone can participate and benefit from this transition. We help citizens with clear information and subsidies. When we engage in large-scale sustainable energy, the benefits must be for the entire community. We create future prospects for everyone with everyone.

In the program, you will find proposals for *'Energy transition'*, *'Climate change and construction'* and *'Traffic'*.

5. Economische ontwikkeling in balans

Perspectief supports developments that are useful for the well-being of our community. We help entrepreneurs create a sustainable and innovative economy. We view projects from the perspective of a larger whole and weigh up all interests. We ensure that citizens and other people involved can participate at an early stage. We pay attention to employment and enjoyment of living. We only make decisions after a thorough examination of their usefulness and necessity. We keep municipal finances in balance.

Tourists are welcome in a healthy and sustainable landscape. In rural areas, we focus on knowledge development together with our farmers and knowledge institutes. Together we bring balance to our economic development.

In the program, you will find proposals for *'Sensible economic development'*, *'Entrepreneurship'*, *'Housing'* and *'Industrial sites and business activity'*.

6. Open, fair and representative governance

Perspectief stands for strong governance that supports the residents and entrepreneurs of our municipality. The municipal council is open-minded, open and diverse so that every citizen feels represented. We actively listen to complaints and ideas. We govern from connection. What is good for all residents is central.

We constantly look for ways to improve our governance. An ombudsperson looks for structural improvement. We monitor the functioning of both the board and the council of representatives. Such governance requires clear communication with accessible information in language that is understandable to everyone. Citizens feel heard.

In the program, you will find proposals for *'Approachability and transparency'*, *'Municipal officials'*, *'Government, board and council'*, *'Control and improvement'*, *'Enforcement and licensing'* and *'Financial policy'*.
